ISN Report

At a personal and academic level, attending to the Keystone Symposia “*Microglia in the Brain*” was a great occasion to enrich my PhD work, updating and incorporating new concepts and methodologies to my research. Furthermore, it was really exciting the possibility to meet peer researchers with whom to share and discuss about neuroimmunological applications and future postdoctoral positions.

Since I am an Assistant Professor at the Faculty of Chemistry Sciences at the National University of Córdoba, attending to this course provided me an upgrade in my scientific background in areas where I am not usually used to work, giving me new tools to understand, teach and relate the cell biology and its neuroimmune response.

Besides, the possibility of attending a course in the US for the first time gave me the opportunity not only to represent my country in this event but to open my mind while learning more about their culture.

Mr. Javier Peralta Ramos, Biologist
PhD Student at the Laboratory of Neuroinflammation and Signaling
CIBICI-CONICET
National University of Córdoba
